"Cloning and characterization of the murine promoter for the colony-
stimulating factor-1-encoding gene.";
Gene 102:165-170(1991).
-!- FUNCTION: GRANULOCYTE/MACROPHAGE COLONY-STIMULATING FACTORS ARE
CYTCKINES THAT ACT IN HEMATOPOIESIS BY CONTROLLING THE PRODUCTION,
DIFFERENTIATION, AND FUNCTION OF 2 RELATED WHITE CELL POPULATIONS
OF THE BLOOD, THE GRANULCCYTES AND THE MONOCYTES-MACROPHAGES.
-!- FUNCTION: THIS CSF INDUCES MACROPHAGES.
-!- SUBUNIT: HOMODIMER, LINKED BY THREE DISULFIDE BONDS.

"Involucrin gene of tarsioids and other primates: alternatives in evolution of the segment of repeats."

Proc. Natl. Acad. Sci. U.S.A. 88:5321-5325(1991).

- FUNCTION: Part of the insoluble cornified cell envelope (CE) of stratified squamous epithelia.

-! SUBCELLULAR LOCATION: Cyroplasmic. Constituent of the scaffolding of the cornified envelope.

-! TISSUE SPECIFICITY: Keratinocytes of epidermis and other stratified squamous epithelia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RNLIATAQAQNQQQTEGVKTEESEPLPSCPGSPPLPDDLLPLDCKN-PN---APFQIRHS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Upadhyaya A.B., Lee S.H., DeJong J.;
"Identification of a general transcription factor TFIIA(alpha)/(beta)
homolog selectively expressed in testis.";
J. Biol. Chem. 274:18040-18048(1999).
-!- FUNCTION: MAY FUNCTION AS A TESTIS SPECIFIC TRANSCRIPTION FACTOR.
BINDS DNA IN CONJUNCTION WITH GTF2A2 AND TBP (THE TATA-BINDING
PROTEIN) AND TOGETHER WITH GTF2A2, ALLOWS MRNA TRANSCRIPTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 159 FQQLGQPSVI-----QTSVPQLNPWSLQATTEKSQRIETVLQ-QPAILPSGPVDRKHLE

Rankyring. A new ankyrin gene with neural-specific isoforms localized at the axonal initial segment and node of Ranvier.";
J. Biol. Chem. 270:325-2359(1995).
I- FUNCTION: Membrane-cytoskeleton linker.
I- ALTERNATIVE PRODUCTS: A number of isoforms are produced by alternative splicing.
I- TISSUE SPECIFICITY: Expressed in brain and other tissues.
I- SIMILARITY: CONTAINS 1 DEATH DOMAIN.
                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                (TBS); a rate, autosomal dominant malformation syndrome with a combination of imperforate anus, triphalangeal and supernumerary thumbs, malformed ears and sensorineural hearing loss.

-!- DISEASE: Defects in SALI are in rare cases associated with hemifacial microsomia (HFM) or Goldenhar syndrome; a common birth defect involving first and second branchial arch derivatives. The highly variable phenotype shows in addition to craniofacial anomalies cardiac, vertebral, and central nervous system defects.
-!- DISEASE: Defects in SALI are associated with branchio-oto-renal (BOR) syndrome, an autosomal dominant disorder manifested by various combinations of preauricular pits, branchial fistulae or cysts, lacrimal duct stenosis, hearing loss, structural defects of the outer, middle, or inner ear, and renal dysplasia. Associated defects include asthenic habitus, long narrow facies, constricted palate, deep overbite, and myopia. Hearing loss may be due to mondini type cochlear defect and stapes fixation.
-!- SIMILARITY: BELONGS TO THE SAL FAMILY OF C2H2-TYPE ZINC-FINGER
                                                                                                                       SUBUNIT: Interacts with HDAC1, HDAC2, RBBP4, RBPP7, MTA1 and MTA2 (MS similarity). Probably associates with NuRD histone deacetylase
                                                                                                                                                              COMPLEX (HDAC).
SUBCELLUIAR LOCATION: Nuclear (By similarity).
SUBCELLUIAR LOCATION: Nuclear (By similarity).
TISSUE SPECIFICITY: Highest levels in kidney. Lower levels in adult brain (enriched in corpus callosum, lower expression in substantia nigra) and liver.
DEVELOPMENTAL STAGE: In fetal brain exclusively in neurons of the subependymal region of hypothalamus lateral to the third

                                                                                                                                                                                                                                                                               ö
                                                                  Included in the invention are polynucleotide sequences encoding the ART-1 protein, and muteated ART-1 proteins which when broken down intracellularly produce a tumour antigen peptide that can recognise HLA antigen and bound cytotoxic T cells. Antibodies which specifically recognise ART-1 and its derivative peptides, are also included in the invention. ART-1 exhibits cytostatic activity. The tumour antigen protein, tumour antigen peptide originating from it, their derivatives, and DNAs are applicable in vivo or in vitro as remedies, preventives and
                                                                                                                                                                                                                                                                                                                                                               120

AAM25965. The proteins can have activities based on the tissues and cells they are expressed in, such as: antinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; cardiart; immunosuppressive; antibacterial; endocrine; cardiant; cardiant; cardiant; antianaemic; antiaggregant; harmostatic; unlinerary; antidiabetic; cytostatic; eneuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; cardiant; and polynucleotides are useful for screening for production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, cancemia, disease, parkinson's disease, neurodegenerative and neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             125
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               245

                                                                                 Sequences AAH84132-AAH84370 represent human nucleic acid sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences AAH84131, AAH84145, AAH84140, AAH84210, AAH84216, AAH84315 and AAH8430 represent 10 full-length cons. While the remaining nucleic acid sequences within the range given above represent the open reading frames (ORFS) of these cDNA clones. Sequences AAG98610-AAG98829 represent the polypeptides encoded by the cell death protective ORFs. The cell death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic pathways when injected into a cell predisposed to or undergoing cell death. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cell death protective; apoptosis; necrosis; human; drug screening; cell death-associated disorder; central nervous system disorder; psychiatric disorder; neurological disorder; ischaemia-related disorder; stroke; cerebral infarction; ischaemic encephalopathy;

cath, and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, an antibody, a ribozyme, or an antisense molecule, can also be used to treat cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischaemia-related conditions such as strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, Huntington's disease, or Parkinson's disease. The modulators may also be used to treat infections such as meningitis, malaria, or trypanosomiasis; vascular diseases such as ischaemic encephalopathy or cerebral infarction; eye conditions such as asthma or chronic obstructive pulmonary disease, neoplastic conditions such as carbona or chronic obstructive pulmonary disease, neoplastic conditions such as cancers or benign tumours; blood cell conditions such as asthma or chronic obstructive as conditions such as cancers or benign tumours; blood cell conditions such as asthma or chronic obstructive orditis; liver conditions such as asthma conditions such as allower clirkosis; kidney disorders such as glomerulonephritis; cystitis; endometriosis; endocrine disorders such as glomerulonephritis; or immune thyroiditis; such as dermatitis or uniquental conditions conditions such as dermatitis or uniquental conditions conditions such as dermatitis or uniquental conditions and as dermatitis or uniquental conditions conditions such as dermatical conditions or conditions and as dermatitis or uniquental conditions conditions and as dermatical conditions or conditions and as dermatitis or uniquental conditions and as as a condition conditions and as a c ö 124 184 244 242 304 302 364 Human; secreted protein; immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; creebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; cancer; opthalmalogical; autoimmune disease; hyperproliferative disorder; 64 62 system disorders such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may additionally be used to generate animal models of cell death-associated disorders. Polynucleotide sequences AAC80531-C80580 represent cDNA encoding human secreted proteins AAB45120-B45169. Sequences AAB45170-B45255 represent alternative polypeptides encoded by the genes, and amino acid sequences to which they are homologous. The genes and proteins have activities to dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive; antiarthritic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; and opthalmalogical. The secreted proteins, polynucleotides, antiagonists and agonists may be useful in treating, preventing and/or diagnosist and agonists may be useful in treating, preventing and/or diagnosing diseases and disorders such as autoimmune diseases of the breast or liver, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. corneal infections caused by cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Albeimer's disease, infections caused by corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotraxis. The polypeptides can also be used to aid wound healing and epithelial cell proliferation and coular disorders e.g. corneal infection also be used as a food additive or preservative to increase or decrease cused in the isolation and characterisation of the genes and proteins of the increase and proteins of

Polynucleotide sequences AAC80531-C80580 represent cDNA encoding human secreted proteins AAB45120-B45169. Sequences AAB45170-B4525 represent alternative polypeptides encoded by the genes, and amino acid sequences to which they are homologous. The genes and proteins have activities cof their activities include immunosuppressive; antiarthritic; of their activities include immunosuppressive; antiarthritic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; and opthalmalogical. The secreted proteins, polynucleotides, antagonists and agonists may be useful in treating, preventing and/or diagnosing diseases and disorders such as autoimmune diseases of neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders such as autoimmune diseases of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. carebral isohaemia, angiogenesis, nervous system disorders e.g. carebral isohaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by the polypeptides can also be used to aid wound healing and epithelial cells to proliferation, to prevent skin aging due to sunburn, to maintain control of the proliferation, to prevent skin aging due to sunburn, to maintain

Sequences halfalatoric against cell death (i.e., apoptosis or necrosis). Sequences AAH84213. AAH84150. AAH84220. AAH84226. AAH84256. AAH84201. AAH84215. AAH84315 and AAH84367 represent 10 full-length cDNA clones, while the remaining nucleic acid sequences within the range given above represent the open reading frames (ORFs) of these cDNA clones. Sequences AAG98610-AAG98829 represent the polypeptides encoded by the cell death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic

death. The cell death protective nucleic and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death. The cell death protective nucleic and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death. The construction of antibody, a ribozyme, or an antisense molecule, can also be used to treat cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischaemia-related conditions such as Alzheimer's disease, thutington's disease, or Parkinson's disease. The modulators may also be used to treat infections such as meningitis, malaria, or trypanosomiasis, wasculat diseases such as isofhaemic encephalopathy or erebral.

Consideration: eye conditions such as asthma or chronic obstructive pulmonary disease; neoplastic conditions such as asthma or chronic obstructive pulmonary disease; neoplastic conditions such as cannot estimate the conditions such as cannot conditions such as cannot can benign tumours; blood cell conditions such as asthma or chronic obstructive pulmonary disease; neoplastic conditions such as cannot estimate the sease or Hashimoto's cirrhosis; kidney disorders such as agencers or benign tumours; or immune contities; or immune contities; or immune continistics or integrals or

that are highly expressed in therine theory (LDMA) sequences (A) that are highly expressed in therine theory (LDMA) sequences (B) and anticancer and cytostatic activity. (A) are used (1) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (1) to identify agents suitable for treatment of uterine or (including expression from gene therapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTS (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTS from different libraries may represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  different parts of the same unknown gene, distorting the estimated trequency of occurrence in a particular tissue. AAY59941-Y60328 represent protein fragments encoded by the human endometrium tumour cDNA library derived EST fragments represented in AAZ41981-242121.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SLITHTIQLIQHNRRLRNLIATAQAQNQQQTEGVKTEESEPLPSCPGSPPLPDDLLPLDC 120

death, and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, an antibody, a ribozyme, or an antisense molecule, can also be used to treat cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischaemia-related conditions such as strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, Huntington's disease, or Parkinson's disease. The modulators may also be used to treat infections such as meningitis, malaria, or trypanosomiasis; vascular diseases such as ischaemic encephalopathy or cerebral infarction; eye conditions such as diabetic retinopathy or macular degeneration; hypertension; myocardial infarction; atherosclerosis; respiratory conditions such as asthma or chronic obstructive pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        endometriosis; endocrine disorders such as Grave's disease or Hashimoto's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protect against cell death (i.e., apoptosis or necrosis). Sequences AAH84132, AAH84131, AAH84135, AAH84201, AAH84201, AAH84205, AAH84205, AAH84205, AAH84205, AAH84201, AAH84131, AAH84135, AAH84201, CDNG clones, while the remaining nucleic acid sequences within the range given above represent the open reading frames (ORFS) of these cDNA clones. Sequences AAG98010-AAG98029 represent the polypeptides encoded by the cell death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic pathways when injected into a cell predisposed to or undergoing cell death, The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAH84132-AAH84370 represent human nucleic acid sequences which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ţ,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequences AAH84132-AAH84370 represent human nucleic acid sequences which protect against cell death (i.e., apoptosis or necrosis). Sequences AAH84145, AAH84101, AAH84201, AAH84201, AAH84202, AAH84205, AAH84201, AAH84315 and AAH84307 represent 10 full-length cDNa clones, while the remaining nucleic acid sequences within the range given above represent the open reading frames (ORFs) of these cDNA clones. Sequences AAG98610-AAG98829 represent the polypeptides encoded by the cell death protective oRFs. The cell death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic pathways when injected into a cell predisposed to or undergoing cell death. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death, and to screen for compounds which modulate their activity or

                  antibody, a ribozyme, or an antisense molecule, can also be used to trea cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischaemia related conditions such as strokes, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human cell death protective cDNA clone CNI-00714 ORF15 protein, SEQ:105.

cirrhosis; kidney disorders such as glomerulonephritis; cystitis; endometriosis; endocrine disorders such as Grave's disease or Hashimoto's thyroiditis; skin conditions such as dermatitis or urticaria; or immune system disorders such as acquired immunodeficiency syndrome (AIDS). The

while the remaining nucleic acid sequences within they converge with the range given above represent the open reading frames (ORES) of these CDNA clones. Sequences AAG98610-AAG98829 represent the polypeptides encoded by the cell death protective CDNA clones are able to protective ORES. The cell death protective cDNA clones are able to prevent, delay or reverse progression through the apoptotic or necrotic pathways when injected into a cell predisposed to or undergoing cell death. The cell death protective nucleic acids and polypeptides can be used in the diagnosis and treatment of disorders associated with cell eath, and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, an antibody, a ribozyme, or an antisense molecule, can also be used to treat antibody, a ribozyme, or an antisense molecule, can also be used to treat cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischaemia-related conditions such as strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, Huntington's disease, or Parkinson's disease. The modulators may also be used to treat infections such as meningitis, malaria, or trypanosomiasis; vascular diseases such as ischaemic encephalopathy or cerebral infarction; eye conditions such as diabetic retinopathy or macular degeneration; hypertension; myocardial infarction; atherosclerosis; respiratory conditions such as asthma or chronic obstructive pulmonary disease; neoplastic conditions such as cancers or benign tumours; blc cell conditions such as anaemia; gastrointestinal conditions such as gastritis or ulcerative colitis; liver conditions such as biliary cirrhosis; kidney disorders such as glomerulonephritis; cystitis; system disorders such as acquired immunodeficiency syndrome (AIDS). nucleic acids may additionally be used to generate animal models of cell death-associated disorders. The present sequence represents a cell death protective polypeptide. system disorders such as acquired

endometriosis; endocrine disorders such as Grave's disease or Hashimoto's thyroiditis; skin conditions such as dermatitis or urticaria; or immune

protect against cell death (i.e., apoptosis or necrosis). Sequences hich protect against cell death (i.e., apoptosis or necrosis). death. The cell death protective nucleic and polypeptides can be used in the diagnosis and treatment of disorders associated with cell death. The cell death protective nucleic and polypeptides can be catch. The diagnosis and treatment of disorders associated with cell each. The and to screen for compounds which modulate their activity or expression. Such modulators, preferably a small organic molecule, an antibody, a ribozyme, or an antisense molecule, can also be used to treat cell death-related diseases. Such diseases include those associated with the central nervous system including psychiatric or neurological disorders, especially ischaemia related conditions such as strokes, and also includes neurodegenerative disorders such as Alzheimer's disease, the modulators may also be used to treat infections such as meningitls, malaria, or trypanosomiasis; or sacular diseases such as inchaemic encephalopathy or macular degeneration; hypertension; myocardial infarction; atherosclerosis; cepiratory conditions such as asthma or chronic obstructive pulmonary disease; neoplastic conditions such as asthma or chronic obstructive pulmonary cell conditions such as an anemia; gastrointestinal conditions such as asthma conditions such as asthma conditions such as asthma conditions such as astences or benign tumours; blood cell conditions such as astences or benign tumours; blood cell conditions such as astences or benign tumours; blood cell conditions such as an an antice conditions such as an and an antice conditions such as an a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cirrhosis, Kidney disorders such as glomerulonephritis; cystitis; endocrine disorders such as Grave's disease or Hashimoto's endometriosis; endocrine disorders such as Germatitis or urticaria; or immune system disorders such as acquired immunodeficiency syndrome (AIDS). The nucleic acids may additionally be used to generate animal models of cell death-associated disorders. The present sequence represents a cell death protective polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
pathways when injected into a cell predisposed to or undergoing cell

                                                                                                                                                                                                                                                           WIPO
                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Prosophila. The invention useful in developmental biology and in elucidating cell sipaniling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticidaes, therapeutics and pharmaceutical frugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

Voluntary Results Feedback Form
> I am an examiner in Workgroup: Example: 1610
> Relevant prior art <b>found</b> , search results used as follows:
102 rejection
☐ 103 rejection
☐ Cited as being of interest.
☐ Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
> Relevant prior art <b>not found:</b>
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention.
